服务课程建设，赋能智慧教学

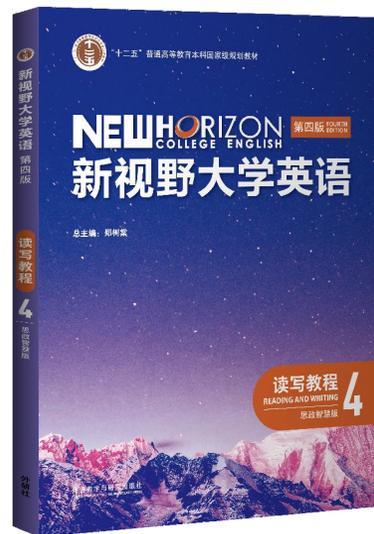

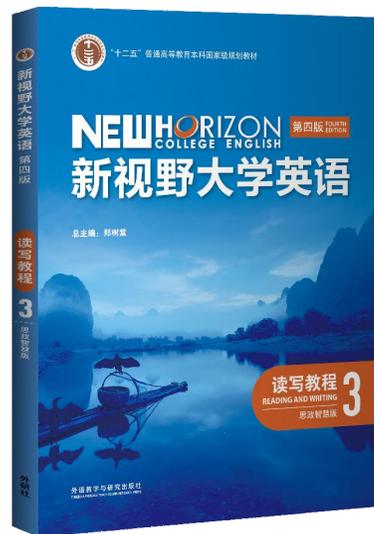

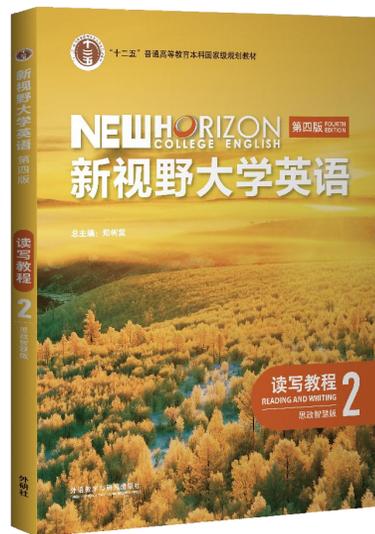

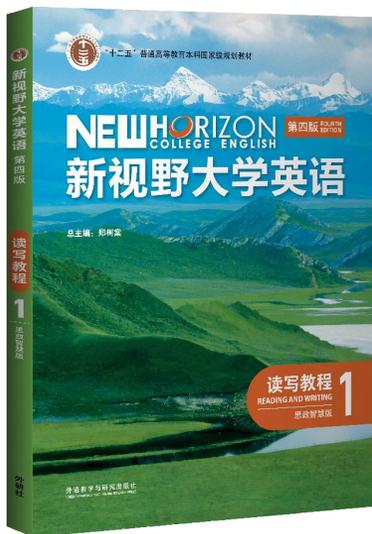

——《新视野大学英语》教与学的“微体验”

李卓

2024年3月22日

大学英语课程基本信息

- 1 课程性质：通识必修课
- 2 开课年级：本科一、二年级
- 3 面向专业：全校非英语类专业
- 4 学时：192
- 5 学分：12

我校大学英语课先后使用了《新视野大学英语（第三版）读写教程》（智慧版）和（思政智慧版）。2023年，第四版教材发布之后，秋季学期开始全面启用新版教材。

1

“润物细无声”的英语思政教材

2

“个性化与人性化”的数字课程

《新视野大学英语（第四版）读写教程》特色

Book 1	Book 2
Fresh start	Language in mission
Loving parents, loving children	Exploring college majors
Heroes of our time	The young generation: making a difference
Social media matters	Mission and exploration of our time
Friendship across border and gender	Striving for financial health
Winning is not everything	Less is more
Book 3	Book 4
The digital age: Are we ready?	Urban development
Life stories	Secrets to beauty
Let's go	Business success in the new age
When work is a pleasure	Man and nature
China's space dream	Passion guides life choices
The economy: power behind everyday life	Energy and food crises

教材共设4个级别，每级包含6个单元，涵盖中国在经济、社会、文化科技与生态文明建设等方面的成就。

单元主题和内容更具课程思政指导性，将价值塑造有机融于话题素材、练习设计、思辨论点、单元任务之中，育人润物无声。

《新视野大学英语（第四版）读写教程》特色

Unit 4 Mission and exploration of our time

Preview

Patience can be considered as the virtue of our age in the years of peace. In today's reform and opening up, our country still needs patience to realize the Chinese Dream. One of the characteristics of patience is the persistence and perseverance. Being diligent, whose expertise in doing each exploration technology has helped China take the lead in a number of technical fields. His patients' deeds and deep affection for the motherland has made him a role model for everyone, especially for the young, who are experiencing "voluntary work" — a life stage of confusion and self-discovery. The young generation can draw inspiration from Wang's persistence, professional dedication, and noble spirit to shoulder the mission of realizing national rejuvenation. As a college student, have you ever thought about what you would do to reach your life and become more the country?

Read each speech on the high seas, and a journey is selected only by diligence — *The Book of History*

读万卷书，行万里路。 ——《吕氏春秋》

Unit 6 Winning is not everything

Preview

Sports can teach valuable life lessons and create wonderful memories. Learning to keep going even when you are tired, and being humble in victory and generous in defeat can just a few of the valuable lessons sports can teach. As a tennis sportsman said, "It's not whether you win or lose. It's how you play the game." Equally important, sports teach people the value of teamwork and cooperation. A good example is the Chinese women's national volleyball team, who have demonstrated the power of united and cooperative efforts.

However, it is also important to be cautious. Overemphasis on competitiveness can raise the spirit of sports and have a negative impact on young people. Now, think about the question: What lessons have you learned from playing sports? How do Chinese athletes with great sportsmanship inspire you? What are the main of a great athlete and a strong team? How will you ensure a good balance between intense competition and friendly play in team sports?

Victory isn't defined by wins or losses. It is defined by effort. If you can maintain your "I did the best I could, I gave everything I had", then you are a winner. — Wolfgang Schäfer (Former Olympic athlete)

Section A

Text A

No limit for China's astronauts in their space exploration endeavors

Pre-reading activities

- Match the description with the pictures below.
 - The first space teacher in China
 - The first person sent into space by the Chinese space program
 - The commander of the first crew to visit the Shenzhou space station
 - The first Chinese person to perform a spacewalk
- Work in pairs and list what qualifications are needed for astronauts.

Text A

China's space exploration had reached a new milestone by 2021, when three astronauts of Shenzhou 12 crew successfully docked at the Shenzhou space station, marked three for months, and then safely returned to the earth. The crew — Ni Haisheng, Liu Boming, and Tang Hongbo — were selected rigorously from the current active, qualified Chinese astronauts. All three astronauts have been training for one of the most spectacular milestones of China's space exploration: building and operating China's first space station.

It went back in 1992 that China approved a blueprint for her manned space program and began training astronauts. The first batch of astronauts was chosen from young pilots in the People's Liberation Army (PLA) Air Force who had at least 400 flight hours in fighter jets or attack aircraft. More than 1,500 pilots applied, and after months of strict screening tests, the number reduced sharply to 14. In 1996, they became the founding members of the PLA Astronaut Corps.

On October 15, 2003, Yang Liwei became the first Chinese person to go into space as the Shenzhou 5 manned mission, making China the third country to send a man into space. During his 28,000 km long expedition, Yang successfully displayed the Chinese and UN flags to hundreds of millions of Chinese who were witnessing his first on television, and said, "Make use of every space possibility and for the benefit of all humankind."

Since Yang's successful journey, China has made a **gigantic** progress in space exploration, and even astronauts have been sent into orbit. The astronauts have performed a variety of experiments and technological tests, undertaken extracurricular activities, and even performed a science lecture watched by tens of millions of students.

To achieve these accomplishments, though, the astronauts have endured countless rounds of training, tests, and drills, checking every detail and every onerous detail in their families for their thorough understanding and continuous support.

Once pilots are admitted to the astronaut team, they must maintain themselves in the study of about 40 subjects, including physics, astronomy, and astronomy. **Physically**, each of these subjects requires extremely rigorous to take four-year courses, but the astronauts have just one year to complete their studies and some pass exams every subject.

During training, to **simulate** weightlessness, astronauts have to wear suits that weigh 100 kg and are uncomfortable for about four hours. They live an average of 2 kg during each training session, and after a session they would be too exhausted to hold cigarettes. When conducting zero-gravity training, astronauts must endure a force as much as eight times their own weight so that they will be able to assist the **g** forces that severely restrict the ability to breathe during lift-off. None of the astronauts has passed the emergency brace to halt the program.

The astronauts have also overcome hardships and difficulties during training. Yang Liwei recalled that when Shenzhou 5 occurred, toward the sky, a low-frequency oscillation made his stomach organs vibrate violently, **causing** almost unbearable pain. He **gritted** his teeth and refused the pain because he was about to make the nation's long-lasting dream of flying in space. During the Shenzhou 7 mission, Zhai Zhigang and Liu Boming discovered they were unable to open the space station's air lock. They decided to use a tool to force the hatch open despite the extreme safety risk. "We both knew what the other was **thinking** at that very moment. We had to **overcome** our fatigue and wear the Chinese flag in space, even though we realized that there would probably be no return trip for us," Zhai said.
